PRODUCT GUIDE

V.01.04.20

TWO GUIDELINES

Orders that are released to TWO are processed in the most timely manner possible. As such, any changes made to an order once it is released to TWO cannot be guaranteed to be applied.

Invoices for orders with multiple products are due upon receipt of each product.

If the order is already in production, initial costs, cancellations or any change costs will be the responsibility of the dealer to cover.

All drawings, notes and emails with questions must be answered before an order is entered in to the production line. Delays in the timely processing of these by customers will lead to longer lead times.

All factory/freight repairs are to have photographic/video proof. If neither are available at the time of placing the repair, it will be processed as a dealer responsibility. TWO will credit back the cost of the repair once proof of factory/freight responsibility is given.

For special request/non-standard/limited availability items please check first with Head Office for availability. Any surcharges for these items will be the responsibility of the dealer to cover, even if it is not listed on the price list.

PDF Estimates generated from the system may not reflect final pricing. If all items are not selected in the order form or details are added to the notes section, the price may be altered.

All dealers are responsible for having the most current price lists and product manuals. If unsure please contact your account manager to confirm.

TABLE OF CONTENTS

In order to prolong the life of your Zipscreen blind and provide optimum performance, we recommend the following care and maintenance guidelines.

Regular Cleaning (At least every 3 months)
• Ensure surfaces are free from dirt, dust and grime.

• Clean the Zipscreen blind with a soft brush.

• Run a soft brush along side channel to prevent dust and dirt build up on zip.

• Clean aluminium with a soft cloth and warm soapy water or a small amount of mild detergent if required. Do not use abrasive cleaning agents (eg. Ajax or steel wool) in any circumstance.

Do Not:
• Do not leave the Zipscreen blind down when you are away from your home or in extreme weather conditions.

• Do not roll the Zipscreen blind up when wet (to avoid mould and mildew).

• Do not force the Zipscreen blind up or down if it is jamming. Forcing the Zipscreen blind may result in further damage (for example, the zip may be forced out of the side channel or the fabric may rip). Contact your Zipscreen supplier for guidelines of how to fix.

• Do not operate spring controlled Zipscreen blinds from the sides - always use the Weight Bar or Handle and pull from the centre.

Common Characteristics:
Depending on the fabric selection, when the Zipscreen blind is initially pulled down some ripples may be evident. The ripples will lessen over time as the weight of the blind will stretch the fabric slightly and the ambient temperature will heat the fabric.

When a motorised blind is operated some 'jolting' may be evident. This effect is due to wind gusts causing spontaneous friction between the zip and side guides. This occurrence does not damage the blind.

⚠ **Operate the Zipscreen blind at least once a week to prevent build-up of dirt that will inhibit the operation of the blind.**

ZIP**SCREEN**

To ensure you are reading the most up to date product information, always refer to the latest version of the product guide. The latest version is available to download from the TWO Ordering System.

If you have any product, installation, ordering or pricing questions, please contact your TWO Account Manager for assistance.

Side Fit

Face Fit

Side Fit (Inside): The Zipscreen is installed on the inside of the opening.

Face Fit (Outside): The Zipscreen is installed on the front of the opening.
When determining the mount, check for any obstructions within or outside of the opening such as hand rails and check for out-of-square measurements, which may affect the operation of the screen as it moves up and down.

Automation: Connexoon Windows RTS

Connexoon Window RTS is an intuitive, smart and playful app control solution designed to simplify your life.

- Control for up to 30 RTS channels per Connexoon from iOS and Android devices
- 4 scenarios per Connexoon
- 4 modes per Connexoon
- 8 schedules per Connexoon
- Automate window coverings with Scenes and Schedules
- Supports Up/Down/Stop commands and incremental control (tilt/brightness)
- Remote access via internet connection
- Ability to connect 4 smartphone devices
- Compatible with entire range of RTS products
- IFTTT (If This, Then That) compatible
- Ability to control via third-party voice assistants include Google Home and Amazon Echo
- Trigger scenes and schedules using voice commands or pre-set automations

Bubble Strip

The Bubble Strip is the default factory option unless otherwise specified.

Skirt

Ultra Seal

The Ultra Seal is the only option available for the Ultra Lock.

Wind Lock

The Wind Lock comes standard with the Spring Assist control.

Ultra Lock

Surcharge applies.

The Ultra Lock utilises a heavy-duty latching pin and hidden integration to secure and tension your blind; ensuring a reinforced, ultra-smooth fabric finish. The Ultra Seal comes standard with this lock.
